

Arbortext IsoDraw Helps Engineered Arresting Systems Corporation (ESCO) with Creation of High-Quality Manuals

ESCO is a world leader in the design and production of aircraft arresting systems. They produce various types of manuals in military and commercial formats such as Operations and Maintenance manuals, Illustrated Part Breakdowns, and Overhaul Manuals.

BUSINESS INITIATIVE

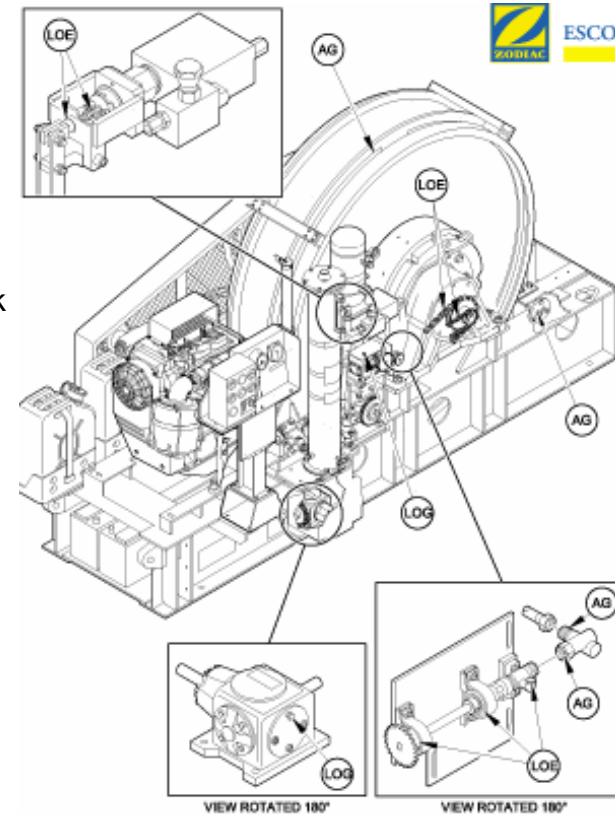

- In the past, ESCO custom produced all of its manuals and created board artwork by hand, which required an extensive workforce. To manage their enormous work load, ESCO wanted a combination of programs that would provide high quality work and be time-efficient.

SOLUTION

- ESCO implemented Arbortext IsoDraw to create and manage graphics in a time and cost-efficient manner. Once created, they could easily be processed in Adobe FrameMaker to produce the final documents.

RESULTS

- Conversion of their manuals to digital format and delivery on CD and taking their technical documentation to the next level
- Soon after implementing Arbortext IsoDraw, their contracted United States Air Force manual was successfully completed, **on-time and under budget**
- Arbortext IsoDraw increased staff efficiency

“We are now producing higher quality products at a lower cost. Thanks to Arbortext IsoDraw we are seeing a reduction of more than 30% in production time over the entire life of the project.”

-Dan Keller, Manager of the Technical Publications Department, ESCO
