

# Arbortext Adapter to Documentum

Leverage the full potential of your EMC Documentum content management system

Arbortext integrates with EMC Documentum to enable automated publishing and improved reuse and collaboration across your organization.

Arbortext Adapter to Documentum improves reuse, collaboration and publishing through its seamless repository integration in Arbortext Editor and the Arbortext Publishing Engine. This adapter is the interface between Arbortext publishing software and EMC Documentum's content management system. With the adapter, Arbortext users can create, capture and reuse information in XML, manage that information in Documentum, and automatically publish that information to multiple types of media.

The adapter provides the ability to create information at a topic level, store it within the Documentum repository, and reuse the topics in a variety of compound documents. By managing content as separate topic components—which can be made up of text, graphics, audio, video or anything you need to manage separately—multiple authors can simultaneously collaborate on different sections, or topics, of the same compound document. In conjunction with the Arbortext Publishing Engine, the adapter also enables automatic publishing to multiple media and audiences from EMC Documentum.

## Key Benefits

### Improves Author Productivity

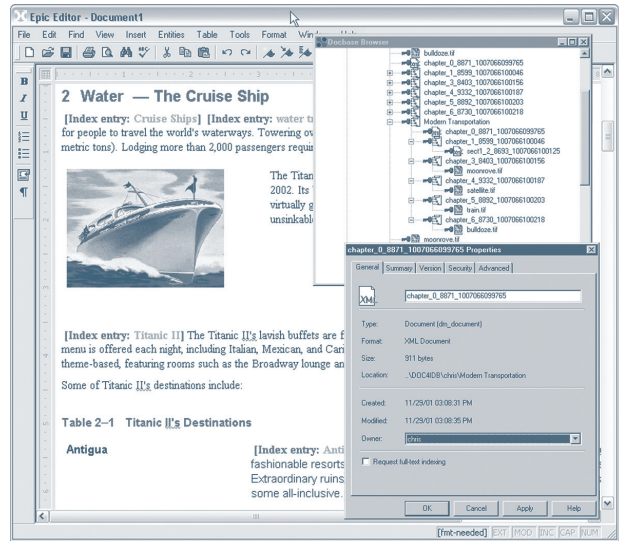

Enables multiple authors to collaborate on the same compound document at the same time and makes information reuse easy.

### Reduces Publishing Costs

Supports information reuse, interchange and automated publishing.

### Increases Information Quality

Provides seamless access to EMC Documentum functions, such as security and versioning functions, through Arbortext Editor.

The Arbortext Adapter for Documentum provides seamless access to repository functions directly from Arbortext Editor.

## Features

### Direct Access from Arbortext to Repository Services

- Check-in/check-out
- Revision control
- Delete
- Rename
- Search
- “Where used” function

### Compound Document Support

- Direct insertion of document components into open compound documents
- Insertion by reference of document components into open compound documents
- Bursts XML documents into component objects that are stored in the repository
- Configurable bursting rules for component boundaries, storage locations, object naming, assigning object properties, and more

### Automated Functions

- Automatically assembles XML virtual documents when checked out for editing or viewing
- Use with EMC Documentum workflow to automate publishing processes

## Related Products

The Repository Adapter to Documentum is a fully functional, out-of-the-box component that is included with no additional cost with Arbortext software. You can optionally install the adapter with both Arbortext Editor and Arbortext Publishing Engine. In addition, the Arbortext Publishing Engine adapter includes an API that allows you to customize the integration.
