

Ten Reasons to Utilize Windchill® 10

- DO MORE THROUGHOUT THE PRODUCT LIFECYCLE
- KNOW MORE ABOUT YOUR PRODUCT PERFORMANCE
- GET MORE VALUE OUT OF YOUR PLM SYSTEM

NOTE: One needs to be online to view interactive media.

▶ [Next Page](#)

For executives, managers and members of product teams seeking to better manage the complexities of creating and servicing products, Windchill 10 can help bring products to market faster while meeting an ever increasing number of market requirements. Windchill 10 offers powerful capabilities that allow you to do more with regard to the configuration, validation and control of product structures – from engineering through aftermarket servicing. Companies can know more about their products' performance with Windchill modules that focus on product analytics and quality management. And with a modern user experience and powerful administration tools, customers can get more value out of their PLM investments with Windchill 10.

Here are ten reasons why using Windchill 10 can help you

[Do More](#) > [Know More](#) > [Get More](#)

Do more with configurations throughout the product lifecycle:

- Manage a wide [breadth](#) of different product structures
- Great [depth](#) of content within a product structure
- Capabilities to help streamline your key [processes](#)

Know more about your product's performance

- Understand [product cost](#) early in the product lifecycle
- Manage and improve [product quality](#)
- Understand whether a product meets [compliance and environmental regulations](#)

Get more value out of your PLM System

- Easy to [learn](#)
- Easy to [use](#)
- Easy to [maintain](#)

[More resources](#) to fully leverage the power of Windchill 10

[▶ Next Page](#)

Breadth of capabilities

Windchill 10 manages the complete digital product representation from initial project planning to critical aftermarket business processes.

- Manage both simple and complex product structures which may contain multiple kinds of content developed using PTC or third-party applications
- Repurpose engineering bills-of-materials (eBOMs) data to define manufacturing information such as mBOMs (manufacturing bills-of-materials) and process plans.
- Create and manage product-centric technical information and service bills-of-materials (sBOMs)
- Deliver configuration-specific product and information – including dynamic parts lists, works instructions, mBOMs, maintenance procedures, training materials and operator instructions.

Do More:

Enable concurrent design and manufacturing activities

Improve product and service performance

Streamline design and manufacturing outsourcing

Program Portfolio Management

Product Data Management

Depth of capabilities

Windchill 10 offers one user experience for both mechanical and electrical engineers. Whether it's engineering drawings, initial sketches, schematic drawings, PCB layouts or wire harnesses – all product content is accessible anytime, anywhere, across all teams and organizations.

Overview of CAD Data Management in Windchill 10

MCAD

Windchill offers bi-directional capabilities with all for the leading mechanical design applications to allow many groups and/or vendors to easily collaborate together on the overall design.

Tutorial on Managing ECAD Design Data in Windchill 10

ECAD

With more and more companies now having to work with electro-mechanical products, Windchill allows you to incorporate electrical designs together with mechanical models within one repository.

Do More:

Manage MCAD, ECAD, Software and related documents in one central repository

Embedded Software Impact

Software

Windchill also tightly integrates with PTC's Integrity software to ensure that a product configuration is utilizing the correct version of software.

In addition to Integrity, Windchill also offers out-of-the-box integrations with open-source software development tools such as Eclipse, Subversion and Bugzilla.

Process-related capabilities

Windchill 10 simplifies and streamlines many product lifecycle processes such as:

Detailed Development

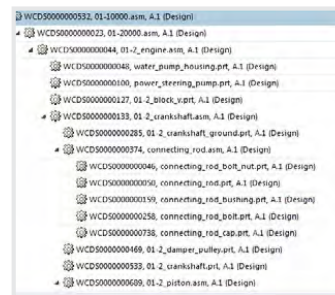

- Manage detailed design – from planning through release-to-manufacturing
- Top-down design – Increase productivity by creating and/or modifying CAD assemblies directly within Windchill, outside of the CAD environment.
- Design-in-context – Reduce and even eliminate the need to work with large top-level assemblies

Variant Design and Generation

- Streamline Assemble-to-Order (ATO), Configure-to-Order (CTO) or Engineered-to-Order (ETO) product development
- Define the logic and rules that govern all possible product variations
- Generate a list of product options for multiple departments to utilize in defining acceptable product variations

Do More: Improve product lifecycle processes

Change and Configuration Management

- Out-of-the-box best practice change management process
- Manage evolution of configurations over time using lifecycle templates
- Efficiently compare and investigate product structures

[Next Page](#)

Process-related capabilities

Partner Collaboration

- Simultaneously work with multiple vendors by checking out a CAD design to multiple projects at the same time
- Transfer packages of product information with security and traceability between unconnected PLM systems

Manufacturing Process Management

- Enable concurrent product and manufacturing process definition
- Define logic and rules to govern possible manufacturing variations
- Easily utilize key manufacturing characteristics within a process plan

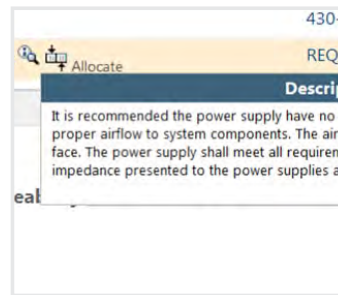

Validation and Verification

- One user experience to interrogate both ECAD and MCAD abstractions
- Automatically detect, manage and report interferences in 3D product models
- Easily create interactive animations

Do More:

Improve product lifecycle processes

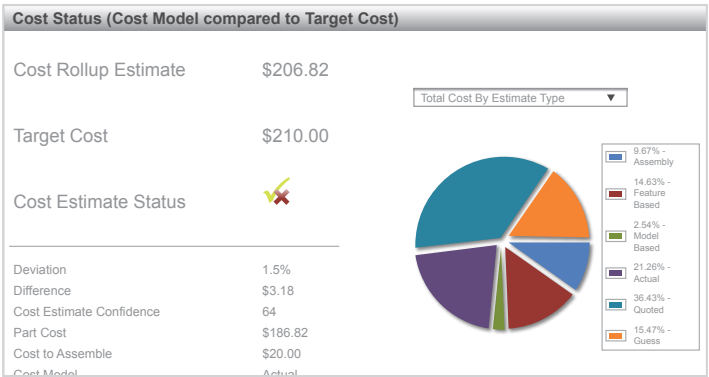

Requirements Definition and Management

- Easily understanding the relationships between requirements and product structures
- Provide visibility of requirements to all teams throughout the product lifecycle
- Monitor how well a product complies with customer expectations

Product cost analytics

Windchill Cost makes product cost analytics an integral part of the standard product development process. This helps ensure that products are launched at or below target costs by providing real-time visibility of target and estimated costs to all stakeholders.

Product quality

Windchill Quality Solutions offer a systematic, enterprise-wide approach to ensure a product meets the requirements defined for it over the course of its lifecycle.

Quality overview video

Quality planning

Balancing requirements for function, safety, performance and cost while ensuring these requirements are validated during design, test, manufacture, service and use

Quality demo video

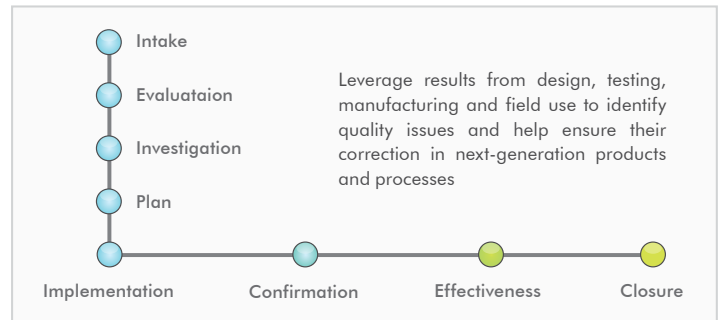

Quality execution

Analyzing product reliability and risk early during product design, testing as-designed products to validate performance and controlling critical characteristics during manufacture and service

Know More:

Manage and improve product quality across the product and service lifecycle

Quality improvement

Quality governance

Establish enterprise-wide quality guidelines and policies to monitor quality improvement efforts, meet government or industry standards and provide complete management visibility into issues of product and process quality

▶ Next Page

Product compliance and environmental impact

Windchill Product Analytics modules provide current, accurate visibility of environmental compliance, with regulations such as REACH and RoHS, as well as carbon emissions and other critical performance factors. Utilizing actual product data while automating the traditionally time-consuming processes of supplier data capture, BOM roll up, and reporting, allows companies to make decisions earlier and identify issues before they become costly problems in manufacturing or the field.

Easy to learn

The Windchill 10 user experience has a clean look and feel that minimizes the learning curve.

Home
Home displays information specific to you - your assignments, checked-out work, subscriptions, and more. You can customize your Home page to show the information that you are interested in.

Breadcrumbs
Breadcrumbs allow you to see where your object is located in the system. You can click on the breadcrumbs to navigate to these locations.

Advanced Search Tab
Most of the time, Simple Search will be enough. Use Advanced Search when you need more power. Your Search history and Saved searches are also available on the Search tab.

Browse Tab
When you want to look through the information stored in the system, use the Browse tab. The Browse tab provides an overview of the system's data.

UI enhancements overview video

Get More:

Expand or accelerate the roll out of a single PLM system to the extended product organization

Windchill can be the single source of product information for not just Engineering, but the entire enterprise

MARKETING

Access up-to-date 3D models for promotional activities

SALES

Check status of customer's latest design

FIELD OFFICE

Look-up configuration-specific data

PROCUREMENT

Determine which products use a particular component

MANUFACTURING

Ensure new products are designed for manufacturing

PROGRAM MANAGEMENT

Know the up-to-date status of any program-related change requests

EXECUTIVES

Understand the overall state of portfolios, programs, and projects

Easy to maintain

Windchill 10 offers improved monitoring and troubleshooting capabilities with tools that help optimize numerous IT and business administrative processes. Windchill 10 also offers tools that allow administrators to configure the system to their specific needs, as opposed to costly customization.

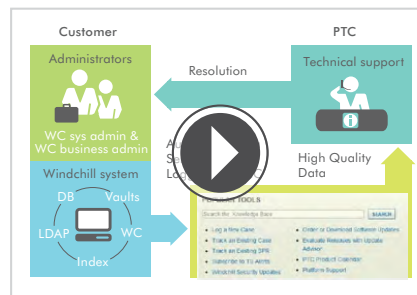

Add new attributes to standard forms and displays to ensure you gather and show information that's important to your company.

Easily define new attributes with out-of-the-box configuration tools and forms.

Get More: Lower the total-cost-of-ownership (TCO)

The **System Configuration Collector** accelerates the problem resolution process.

The **PTC System Monitor** constantly monitors and proactively detects any system bottlenecks in the Windchill production environment before they impact users.
